digital media architect, project management	45 month	solution integration
consulting	31 month	analysis, design
scientific research	47 month	knowledge modeling data science
software development	36 month	apps, web- services
teaching	11 month	software engineering, java
hardware development	8 month	micro controller
coaching	28 month	rowing, business

professional engagement **256 month consolidated**

note: part-time employment is consolidated to equivalent full-time

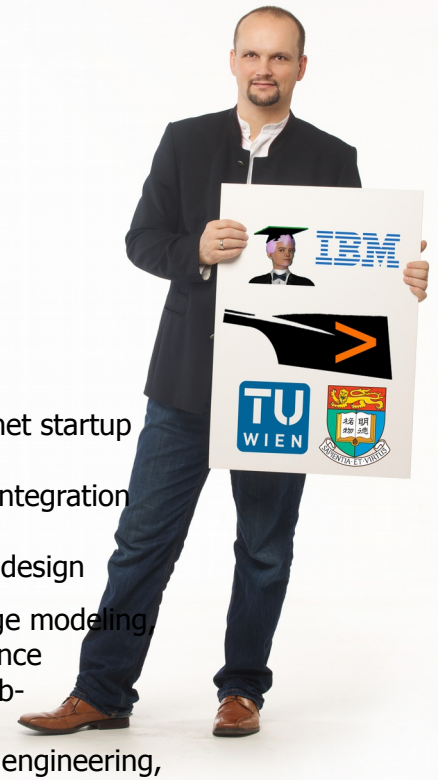

Résumé

I am interested in the true potential of people and organizations. How to unveil and support it. Most of us never know. That's what fascinates me as an athlete in rowing and later as coach. Find those secret treasures inside oneself.

I've been always interested in bridging different worlds, like technology and business. That's why I studied economics in China to enlarge my view as a computer scientist. Looking for the frontier and crossing borders.

In consequence I started some for-profit and not-for-profit ventures, as a „spin off“ from my IBM 3D Internet and new media engagements. These includes FP7 & LLP projects funded by the European Commission as well as teaching and consulting engagements with educational institutions, corporations and public bodies in Central Europe.

Today I focus on the insight buried in data, again to find hidden treasures for my clients, to help find and improve true potential.

Management Engagement

- 2009-now CEO of the SME Armada Sport- und Schulservice KG: business development keg.hammermueller.at
- 2007-now founding and CFO of the not-for-profit organization Verein Offenes Lernen: finance, strategic research & development lead o-le.org
- 2003-2009 founding and CFO of the not-for-profit organization Ausdauerclub Armada asc-armada.at
